

Acme Metrics API v1.0 Reference

The Acme Metrics API allows developers to programmatically track, retrieve, and manage user events and custom metrics within the Acme ecosystem.

Base URL

All requests detailed in this documentation should be made to the following base URL: `https://api.acmemetrics.com/v1`

Authentication

The Acme Metrics API uses **Bearer Tokens** to authenticate requests. You can generate an API key from your developer dashboard.

Include the token in the Authorization header of all API requests:

HTTP

Authorization: Bearer YOUR_API_KEY

 **Warning:** Keep your API keys secure. Do not hardcode them into client-side applications or commit them to public repositories.

Core Endpoints

1. Track an Event

Records a new user action or metric data point.

- **HTTP Method:** POST
- **Path:** `/events`
- **Content-Type:** `application/json`

Request Body Parameters

Parameter	Type	Required	Description
<code>event_name</code>	String	Yes	The name of the action being tracked (e.g., <code>user_signup</code>).
<code>user_id</code>	String	Yes	Unique identifier for the user performing the action.
<code>properties</code>	Object	No	Key-value pairs containing metadata about the event.

Sample Request

JSON

```
POST /v1/events
Host: api.acmemetrics.com
Authorization: Bearer am_fx9203jsldk20
Content-Type: application/json
```

```
{
  "event_name": "checkout_completed",
  "user_id": "usr_99214A",
  "properties": {
    "cart_total": 89.99,
    "currency": "USD",
    "item_count": 3
  }
}
```

Sample Response (201 Created)

JSON

```
{
  "status": "success",
  "event_id": "evt_771a2b3c4d",
  "timestamp": "2026-05-31T23:07:00Z"
}
```

2. Retrieve Event Summary

Fetches aggregated totals for a specific event within a given time range.

- **HTTP Method:** GET
- **Path:** /events/summary

Query Parameters

Parameter	Type	Required	Description
event_name	String	Yes	The name of the event to query.
start_date	String	Yes	ISO 8601 formatted start date (e.g., 2026-05-01).
end_date	String	No	ISO 8601 formatted end date. Defaults to current date.

Sample Request

HTTP

GET /v1/events/summary?event_name=checkout_completed&start_date=2026-05-01 HTTP/1.1

Host: api.acmemetrics.com

Authorization: Bearer am_fx9203jsldk20

Sample Response (200 OK)

JSON

```
{
  "event_name": "checkout_completed",
  "start_date": "2026-05-01",
  "end_date": "2026-05-31",
  "total_count": 1420
}
```

Global Error Responses

The API returns standard HTTP status codes to indicate the success or failure of a request. Error responses include a JSON body with a descriptive error message.

HTTP Status	Error Code	Description
400 Bad Request	MISSING_PARAMETER	A required body or query parameter is missing.
415 Unsupported Media Type	INVALID_JSON	The request body is not valid JSON.
401 Unauthorized	INVALID_AUTH	The API key is missing or invalid.
429 Too Many Requests	RATE_LIMIT_EXCEEDED	Request limit exceeded. The default limit is 60 requests per minute.

Sample Error Response (401 Unauthorized)

JSON

```
{
  "error": {
    "code": "INVALID_AUTH",
    "message": "The provided API key is invalid or has expired."
  }
}
```
